Ms. Stephanie Jean-Stern
160 Convent Avenue
New York, NY 10031

Dear Ms. Stephanie Jean-Stern:

My name is Danny Weng, I'm a freshman and currently majoring in Electrical Engineering. I recently join EWB, Engineers Without Borders club in CCNY. As a kid I always like tinkering around with circuitry. I was always fascinated about it and hoped that one day I was able to design motherboards etc. That's why I wanted to study engineering and use the skills in the real world. City College was my first pick when I was filling out my college applications because I wasn't the type to live in dorms but most importantly it has a good engineering school. Also, my guidance counselor from high school recommended the school if you were interested at engineering. After college, securing a good job is probably the most important thing to me. My family worked hard to provide things for me. I'm grateful for them and paying them back is the least I can do.

Reading and writing is always not a strong part for me. I was an ELA student and although I don't like reading or writing, I must suck it up and get the job done. Because without read or writing you probably not going to get anywhere in life. Reading and writing in the engineering field is very vital. Engineers relies on communications and information to do there job probably. And without the basics such as reading and writing, you are not going to get the job done efficiently. By the end of the semester I hope to strengthen my source use practices, practice my usage of various resources, and hopefully enhance my strategies for reading, drafting, revising, editing, and self-assessment. Some of the engineering topics that I would like to research on it bridge collapse, high horse power in cars, and composite materials.

Sincerely,

A handwritten signature in black ink, appearing to read 'Danny Weng', written in a cursive style.

Danny Weng
